DETAILED ACTION

Allowable Subject Matter

Claims 1-57 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to disclose or fairly suggest the invention as claimed. The prior art Petermann discloses A reaction mass positioned along an axis of a sonde; and at least two pads, wherein each of said at least two pads are connected to said sonde and said reaction mass using a plurality of variable angle pushing rods to convert an axial motion into a radial motion so that said at least two pads generate elastic waves through the earth formation upon activation of said first reaction mass as a result of impact of the pads against the wall; wherein the impedance of the acoustic borehole source may be controlled using said plurality of variable angle pushing rods.

Mallet discloses the use of a plurality of motorized reaction masses (48 in figure 3) as a means for imparting signals in a downhole environment.

The prior art fails to disclose or suggest variable angle push rods which contact the earth at a designated location, controlling the impedance through the angle of the rod, and wherein activation of the first motorized reaction mass provides variable location adjustment for said at least two pads while said at least two pads are positioned at the designated location of the acoustic borehole source, such that said at least two pads generate elastic waves through the earth formation at multiple locations while at the designated location.

The method steps corresponding to the disclosed product structure are implicitly taught by the product structure. The method steps corresponding to product structure that is not disclosed or suggested are also not disclosed or suggested.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
